

# Invest in a real server

## TO BOOST PRODUCTIVITY

PCs were designed to run one individual's applications, not an entire company. It's time you took a good look at the advantages of moving your business to a real server based on Intel® Xeon™ processors. **A real server based on the Intel Xeon processors gives you a more dependable computer system**, because servers have higher reliability and performance than PCs. With a server powering your business, customers and employees can gain access to critical data without the risk of frequent downtime interruptions.

## REAL SERVERS DELIVER

A real server also delivers real cost savings in terms of higher uptime, improved productivity, lower operating costs, and lower maintenance costs.

### **Company Name, A Local Intel Reseller**

We'll tailor a server to your business, your budget, and your future needs. **Call or e-mail us today** to learn how Intel Xeon processor-based servers can improve your uptime and lower your costs.

**John Doe | CEO of Reseller Name**
