**Think servers are complicated
and expensive? Think again.**

Real servers based on the Intel® Xeon™ processor are affordable, simple and capable. And XYZ Company, your local Intel® reseller, can design, build, install and support your server precisely to your needs. We can even remotely manage your servers for higher business uptime and peace of mind. Call us today, and let us tell you about the newest generation of small business servers based on the Intel Xeon processor.

stamp

The Intel® Xeon™ processor is designed specifically for server processing. It's full of innovative technologies such as the Intel® NetBurst™ microarchitecture and Hyper-Threading Technology that speed up Web work, e-mail, database transactions and other critical applications. The Intel Xeon processor also has high-reliability features such as memory error-checking and correcting, and faster data speeds, helping to ensure that business-critical databases, e-mail and other applications are always available.
