

A Real Server Gives You More of Everything.

BUSINESS IS DOWN

Profits are hurting. It may sound strange, but investing in a real server can contribute to a healthier bottom line. Simply put, a **real server delivers**:

- **More dependability.** Servers have high-reliability features such as a memory error-checking, heavy-duty fans and power supplies, redundant components and self-monitoring.
- **More value.** A real server can boost your bottom line through higher server uptime, higher productivity and lower maintenance costs.
- **More growing room.** Servers are designed to grow with your business. Add memory, storage and peripherals as your user base and data volume grow.
- **More performance.** The Intel® Xeon™ processor is designed to run multiple applications at once, process more data and protect data. Plus, one server can run two Intel Xeon processors, increasing your compute power.

REAL SERVERS ARE REAL EASY

As your local Intel reseller, XYZ Company can customize a real server based on the Intel Xeon processors for your business. We build a variety of servers based on Intel Xeon processors, Intel® Server Boards, Intel® Server Chassis, Intel® RAID Controllers and Intel® PRO Server Adapters. We'll tailor a server to your business, your budget and your future needs.

Call or e-mail us today to learn how an Intel Xeon processor-based server can give you more than the system you're now using.
